

The Electrical and Electronic Equipment Act (ElektroG) in Germany contains several requirements concerning the handling of electric and electronic devices as waste. In the following paragraphs, we list the most important requirements for you.

1. Separated recycling of „old devices“

Electric and electronic devices that have become waste are called old devices. Owners of such old devices have to bring these to recycling facilities, where these are handled and recorded separately from urban solid waste. Old devices must not end up in the household refuse. In fact they have to be collected in special collecting and recycling systems.

2. Batteries and accumulators

If possible, electric and electronic equipment has to be disposed separately from built-in batteries and / or accumulators.

3. Possibility for disposal of „old devices“

Owners of old devices from private households can dispose these at the public waste disposal authorities or bring them to producer or seller related disposal locations. You can find these disposal locations online:

<https://www.ear-system.de/ear-verzeichnis/sammel-und-ruecknahmestellen.jsf>

4. Privacy information

Old devices often contain private data, especially appliances from data processing and communication equipment, as smartphones or hard discs. In your own interest, please arrange to eliminate all personal and private data from your disposed equipment.

5. Meaning of the symbol „crossed out waste container“

The labelled symbol showing the „crossed out waste container“ on electric and electronic equipment indicates that

the concerning equipment has to be disposed separately from urban solid waste.

6. Producer's WEEE registration number

As a producer in terms of the German ElektroG we are registered with the German registration authority Stiftung Elektro-Altgeräte-Register (Nordostpark 72, 90411 Nürnberg), having been granted the following WEEE registration number:

DE 51131353
